## The White, Black, and Red that Form Mine City.

White--- Lying in the deep blue ocean in the past, the Akiyoshidai tableland area was a bed for coral reefs. This turned into limestone over 350 million years, which formed a majestic karst plateau.

Black--- High-quality anthracite coal was created from ancient forests about 200 million years ago. Omine coalfield has supported Japanese industry as one of the largest coal producers.

Red--- Naganobori Copper Mine is a good locality of "red copper": copper of high quality formed by intrusion of magma into limestone about 100 million years ago. Mine City, with its long and dynamic background, is symbolized by the colors of the white, black and red which have historically fostered the area.

#### CONTENTS

The designated Special Natural Monuments of Akiyoshido Cave, Kagekiyodo Cave, and Taishodo Cave give us an opportunity to enjoy the beauty of nature in various ways. The Akiyoshidai tableland holds the Japan largest mountain-burning event every February, when you can see a fire spreading swiftly over the 1,138-hectare grassland. Cycling and trail-running are also among the popular outdoor activities in the area. Don't miss visiting the mysterious cobalt blue spring-fed Beppu-Bentenike Pond.

## A City of Harmony: Nature, History and Unity

Mine City was designated by Japanese Geoparks in 2015, where you can physically feel a variety of benefits brought by the activities of the earth in the karst plateau: in the coal produced by the Omine Coalfield, and in the copper produced by the Naganobori Copper Mine among others. Mine City is also rich in cultural and historic assets including the Headquarters of the Oda-Edo battles, recognized as the birthplace of the Meiji Restoration. Here you can feel the long, storied history of the area. In addition to this, there are a variety of traditional seasonal festivals and events.

#### CONTENTS

Karstar, is a hub facility for the Geopark that includes a visitor's center and café. It is perfect as a stop-off point for hikers and cyclists. Every April, Mine Sakura Park holds the Mine Sakura Festival: a fantastic sight which features rows of cherry trees lit up by lanterns. In addition, be sure to visit the closely-observable wild animals of Akiyoshidai Safari Land, the dance of fireflies in Yashiro district in Shuho town, and the exotic Mine Lantern Night Festival.

## City Development Plan

#### Visions for the Future

#### A township in harmony with nature, whose people lead full, peaceful lives.

#### $\sim$ City development that nurtures dreams and embraces ancient, storied past. $\sim$

Mine City continues to make the utmost policy efforts for the safety and security of the citizens. It ensures the enhancement of the medical services, welfare for senior citizens and citizens with special needs, and the child-rearing environment. It also promotes tourism exchange, hospitality-centered city development, the creation of diverse industries, the expansion of

employment, the attraction of enterprises, the improvement of educational environment, the inheritance of local history and culture, and human resource development for supporting local activities. Based on the PDCA cycle, we are trying to maintain a healthy fiscal administration by improving operations and the promotion of joint initiatives between public and private sectors.

Priority Projects

City development is being performed via a variety of policies and measures such as (but not limited to) international exchanges, a focus on interindustry agricultural revitalization and Geopark activities.

#### Three <mark>Projects</mark> to Carry <mark>Our Dre</mark>ams

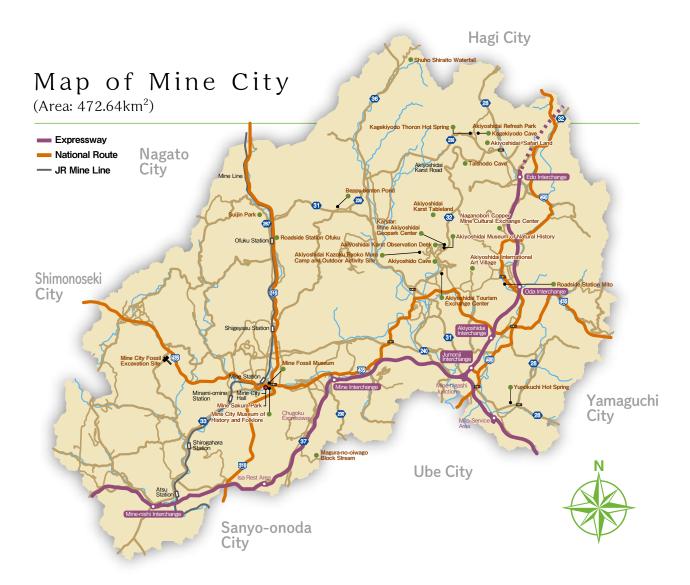

Mine City is proactively working on developing a city where people want to move and live by promoting the following three projects: 1) International Exchange Promotion Project: proactively sending information to the world and inviting inbound tourists through exchange activities.

2) Interindustry Agricultural Revitalization Project: using the production, processing, and distributing industries to provide

stability to agriculture, and to create and expand employment opportunities for people engaged in agricultural production.

3) Geopark Activity Promotion Project: broadening tourism exchange and the economy of the city by promoting efforts and dispatching information to enhance the appeal of local areas, as well as utilizing manga and animation to support public relations campaigns for the promotion of settlement initiatives.

#### Access

#### Chugoku Expressway

- •From Mine Interchange ······ 7 min. by car
- •From Mine-nishi Interchange •••• 20 min. by car **Air**
- •From Yamaguchi Ube Airport •••• 50 min. by car

**City Tree: Evergreen Oak** The evergreen oak is a tall tree, belonging to the Fagaceae family of plants, and grows wild citywide.

Having long been used as hedges, farming utensils and building materials, it is familiar to the citizens.

**City Flower: Japanese Cherry** A deciduous tree of varying height belonging to the Rosaceae family of plants, it is well-known as the representative flower of Japan. Viewing cherry blossom trees can be enjoyed citywide; in particular, the row of cherry trees along the Asagawa river is one of the most popular sites appreciated by the citizens.
